ABSTRACT:

- The aim of making the marriage hall reservations and accounting system with online facility is to provide such **web application,** which could facilitate any kind of marriage hall with the best reservation and accounting system. It will be serving as the backbone of the marriage hall management system.

- With this software, the management team gets reliable and efficient computerized database reservation and accounting system. The management team will be able to reserve customer's marriage at any specific time along with their customized request.

- This project helps the user to communicate with the website and the admin and can solve their issues if developed further.

AREA:

- The main purpose for developing this major project Marriage Hall Booking system is to man-age the details of Inventory, Customers, Marriage Hall, Booking.

- It manages all the information about Inventory, Payment, Booking. We use front end using HTML and CSS as it helps to get a better UI to work with.

LIST OF ABBREVIATION:

HTML	Hyper Text Mark-up Language
CSS	Cascading Style Sheets
UI	User Interface
JS	Java Script
DB	Database

1. INTRODUCTION

Introduction to Web application development:

HTML

- **Basic HTML (Tags**, Element, Attributes, Paragraphs, Headings, Line Breaks, Horizontal Rule, Lists, Table, Colour Codes, Font, Text Linking, Email, Images, Background, Comments, Meta, Media, Charset**)**
- **Basic concept** (WWW& HTTP, HTTPS, Client Server Communication**)**
- **HTML Forms** (Input**,** Text Fields, Password, Checkbox, Combo Box, Radio, Text
    - Areas, Files, Buttons**)**
- HTML5 features

CSS

- Basic CSS (selector, internal, external, Inline, Class, Id, Background, font, Text, Padding, Margin, Border, list CSS, hovering and elements)
- Advance CSS (border-radius, opacity, cursor, layers, position, display, float, gradient, and multiple-column)
- Concept of Menus (single menu, dropdown menu)
- Template, design using CSS div.

JS

- JavaScript (js) is a light-weight object-oriented programming language which is used by several websites for scripting the webpages.
- Client-side validation.
- Dynamic drop-down menus,
- Displaying date and time,
- Displaying pop-up windows and dialog boxes (like an alert dialog box, confirm dialog box and prompt dialog box).

API

- An **application programming interface** (**API**) is a connection between computers or between computer programs.
- It is a type of software interface**.**
- A document or standard that describes how to build or use such a connection or interface is called an **API specification**.
- In contrast to a user interface, which connects a computer to a person, an application programming interface connects computers or pieces of software to each other.

2. SYSTEM OVERVIEW

2.1 Existing System:

Previously built weather report web-based application was compatible with system and every time users start this application, they have to set their default location to get weather reports on it. Due to complex coding, system responding time was high and require more memory to get start up. The concept of graphics for geographical region was not implemented in older version. Dynamic concept was not implemented under the existing system; thus, theme and colour of web page was not changing as per the weather report.

2.2 Proposed System:

Under web-based weather report application, some exciting features has been added such as managing and handling exception error directly by the system which will be not visible by the user to make it bug free. Multiple choice provided to the user by which they can even select different weather channel as per their requirement and interest in it. Its pattern recognition system will able to notify abut bad weather condition previously before it begins with digital graphics is another added advantage of this system. Once location selected by the user for its system use, it will make it default location and remembered by the system so that users do not have to change every time they use this system.

3. SYSTEM REQIREMENTS

3.1 SOFTWARE AND HARDWARE REQIREMENTS

- Memory - >=1GB
- Hard disk - 590MB
- Resolution - 1024 X 768
- Operating system – Windows (>7), Mac OS X (>10.6), Ubantu η Red Hat
- Web browser - Mozilla Firefox (>3.6), Safari Apple (>5.0), Google Chrome (>4.0)
- Mobile device - Operating System Android (>2.3)
- Eclipse IDE

LANGUAGES USED:

- HTML
- CSS
- JAVASCRIPT
- NODE.JS
- MONGO DB

LIST OF MODULES:

OUR WEB APPLICATION HAS SUCH FOLLOWING MODULES:

- BOOKING MODULE
- LIST OF HALLS MODULE
- AVAILABILTIY MODULE
- PACKAGE MODULE

MODULE DESCRIPTION:

BOOKING MODULE:

- User can manage the booking.
- User can edit/delete the booking.
- Admin can see the list of all booking.
- User can see all the details regarding his booking.

LIST OF HALLS MODULE:

- User can able to see the list of halls in his locality.
- User can communicate to the administrator of hall directly.
- Can access from anywhere to know the location of halls.
- Listing will give more information about the Halls.

AVAILABILITY MODUE:

- Admin/User can manage the event.
- Admin can edit/delete the event.
- Admin/User can see the list of all event.
- Customer can see his event details if confirmed.

PACKAGE MODULE:

- User can see the details about halls package.
- User can know the price of halls for the event
- Admin or provider can change the price according to the dates.
- Packages like providing units (water, chairs, electricity, etc..) can be checked.

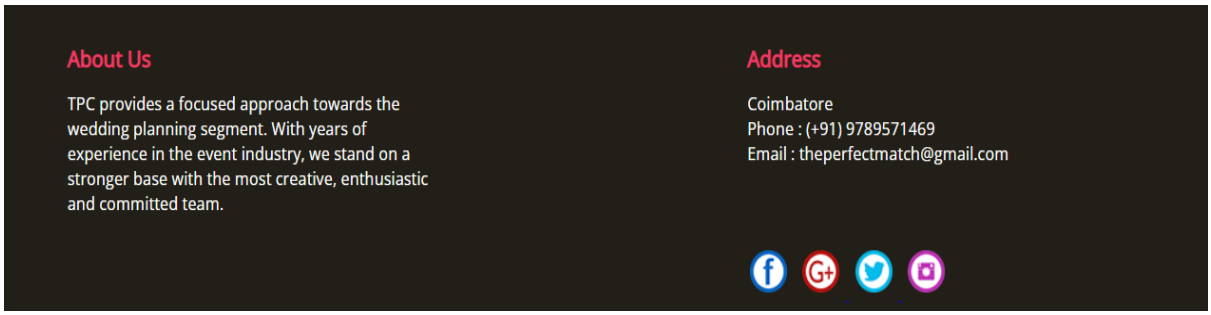
About Website:



CONCLUSION:

- We have created a web application platform that works on node.js to produce the efficiency and needy properties that user or customer will satisfy.

- This project has given more and more knowledge about some of the technologies that we need to develop a lot to survive in my career.

- The combinations of the search functions, the ability to reserve for any user and the ability to manage the whole database from the web-site made this system a very powerful administrative Marriage Hall booking system.
